Coatings Testings and Analysis

Powder Analysis - We provide chemical analysis (ICP-MS, ICP-AES), percent crystallinity, particle size (Microtrac), and morphology (XRD, SEM & optical) to fully characterize your starting powder.

Metallography - Our team employs many advanced mounting, polishing and examination techniques to thoroughly evaluate the most advanced coatings.

Tensile Testing - IMR provides coating adhesion testing of samples, both as coupons or on part geometries.

Fatigue Testing - We provide shear strength and shear fatigue testing of samples from test bars to actual coated parts.

Rotating Beam Fatigue Testing - A valuable tool for evaluating coatings under reverse bending conditions

Bond Pull Testing- Is performed by bonding coupons between pull fixtures, or by bonding special studs to the surface.

Hydrogen Embrittlement - An important technique to evaluate the effects of the coating process on material strength.

Wear Testing - IMR offers a number of different wear tests including Taber, cyclic, falling sand and erosion testing.

Failure Analysis - Our experienced team of metallurgists and material scientists possesses the specialized knowledge to determine why coatings fail.

IMR Test Labs

131 Woodsedge Drive Lansing, NY 14882 USA 1.607.533.7000 sales@imrtest.com

Metallurgical Evaluations

- Alpha Case
- Beta Transus
- Carbide Rating
- Case Depth
- Coatings Metallography
- **EDS** Analysis
- Failure analysis
- Grain Size
- **Inclusion Rating**
- Intergranular attack/oxidation(IGA/IGO)
- Machined surface evaluation
- Microhardness (Vickers, Knoop)
- Microstructure Evaluation
- **Plating Thickness**
- Root cause analysis
- **SEM Analysis**
- Solderability
- Stress Corrosion Cracking Susceptibility (SCC)
- Thermal Spray **Analysis**
- Weld evaluation

Materials Tested

Cobalt Alloys

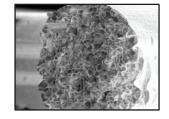

Hydroxyapatite

Polymers

Diffusion Coatings

Plating/Anodizing

Porous Materials

Chemical Analysis

- Alloy Chemistry/ Verification
- Chemical Resistance
- Contaminant **Analysis**
- Hazardous **Substances**
- **Heavy Metal Impurities**
- **ICP-AES** Analysis
- **ICP-MS** Analysis for Trace Elements
- Ionic Contamination
- Particle Size Analysis
- **Phthalates**
- Polymer Additives via GC/MS with Thermal Desorption
- Polymer Identification (FTIR)
- **RoHS Testing**
- Surface Cleanliness
- Thermal Analysis
- **Total Extractables**
- **SEM-EDX**

XRD Analysis

IMR primarily utilizes X-Ray Diffraction (XRD) in the identification of crystalline phases for powders and thin-film samples. This includes the analysis of corrosion products, ceramics, clays, oxide or nitride coatings and more.

- Ca:P Ratio of Hydroxyapatite
- Phase Identification
- Contaminant ID
- Compound Morphology
- Powder Diffraction

- Bond Strength/Coating Adhesion
 - **Coating Shear**
- **Compression Testing**
- **Fatigue Testing** High Temperature up to 1800°F
- **Flexural Testing**
- Hardness
- Passivation Testing for Stainless Steel (ASTM A967, QQ-P-416)
- **Rotating Beam**
- Tensile, Yield Elongation
- TMA
- Wear Testing

Cleanliness/Biocompatibility

IMR offers both characterization and quantification of residues and particulates to help you quickly eliminate sources of contamination.

We offer biocompatibility testing services on surgical devices and surgical tools.

With a range of techniques from micro-FTIR, optical microscopy and scanning electron microscopy (SEM, SEM-EDX), IMR is equipped to test for contaminants including:

- **Cutting Fluids**
- Detergents/Cleaning Solutions
- Oils
- Anions/Cations
- Halogens
- Residues
- **Particulates**
- **Packaging** Contamination

Beta-Tricalcium Phosphate
